International Arbitration in the Energy Sector puts international energy disputes into a global context, providing broad coverage of different forms and systems of dispute resolution across both renewable and non-renewable sectors. With contributions from leading arbitrators, practitioners, academics, and industry experts from across the globe, the eighteen chapters in the book enable readers to compare the approaches to, and learnings from, energy arbitrations across various legal systems and geographic regions.

After outlining the international energy arbitration legal framework, the text delves into a detailed analysis of the problems which regularly arise in practice. These include, among other things, commercial disputes in Part I (e.g. over the upstream oil sector and long-term gas supply contracts), investor-state disputes in Part II (e.g. under the Energy Charter Treaty), and public international law disputes in Part III (e.g. concerning international boundaries and the distribution of natural resources). Alongside recent developments in the international energy sector, attention is given to climate and sustainable development disputes, which raise important questions about enforcing sustainability objectives on individuals, corporations, and states.

Backed by analyses of arbitral awards, national court and international tribunal decisions, treaties, and other international legal instruments, as well as current events and news in the energy industry, this text offers a unique contribution to international energy literature and provides insightful commentary on the prevalent issues in the field.
